AND ITS ADMINISTRATION SYSTEMS FOR THE BENEFIT OF DOCTORS AND PATIENTS.

Press Release

Bornel, near Paris, France, May 28, 2025

SYMATESE ENTERS THE FRENCH MARKET FOR INJECTABLES PRODUCTS.

On the occasion of the SOFCEP-FILLTOX congress, to be held in Monaco from May 29 to 31, 2025, SYMATESE will launch in France its new ESTYME® range of hyaluronic acid (HA)-based injectable gels - SMOOTH, FORM® and SCULPT. These latest-generation products, designed for facial rejuvenation, offer long-lasting, natural-looking results thanks to cutting-edge COLD-X™ TECHNOLOGY¹.

Pioneering, safer technology for patients

One of the few companies to offer a "Made in France" solution on the injectables market, SYMATESE has developed new-generation hyaluronic acid-based injectable gels for facial rejuvenation. These products benefit from a pioneering cold cross-linking technology - called COLD-X TECHNOLOGY by SYMATESE® - which better preserves hyaluronic acid chains: the first innovation in a decade in the USA. Thanks to a minimal rate of modification and the preservation of natural hyaluronic acid architecture, these products boast a tolerance profile backed up by solid clinical studies carried out in Europe, the US and China on over 2,000 patients. These studies have confirmed significant results improving product performance and safety for practitioners and their patients, meeting the growing demands for safe and natural results.

According to Dr Hugues Cartier, dermatologist and Scientific Director of IMCAS: "As investigator of two ESTYME® clinical trials in France, I treated the first patients with two formulations as part of an international program involving over 2,000 patients on 3 continents. In particular, in a randomized, double-blind clinical trial involving 45 patients with moderate to severe naso-labial folds, we demonstrated a more significant improvement with ESTYME® FORM than with the control, as well as a 3-month extension of efficacy over the comparator during 9-month clinical follow-up".

SYMATESE thus offers a differentiated approach providing healthcare professionals with new options to meet their patients' needs with precision and confidence. They are formulated for fluid injection, enhanced comfort for practitioners and patients alike, and long-lasting results. The ESTYME® range will be completed in September with a product for the lips called ESTYME® LIPS.

Europe after a US launch

Jean-Paul Gérardin (CEO of SYMATESE) emphasizes that "this milestone marks SYMATESE's ambitious entry into the French injectables market and accelerates its global expansion, following the recent launch in the USA by Evolus Inc and forthcoming launches in Europe, China and Brazil". He also says that "the agreements signed with Evolus in December 2023, enable SYMATESE to complete its injectables offering with Nuceiva™ toxin, thus constituting a complete offering in the field of facial rejuvenation to meet the expectations of French practitioners and patients".

¹Range developed by SYMATESE

About SYMATESE

In its 27-year history, SYMATESE has established itself as a leading expert in the science of tissue regeneration. Thanks to cutting-edge research and its technological platform integrating collagens, hyaluronic acid, silicones and thermoplastics, the company is developing innovative medical solutions that are transforming patients' lives and revolutionizing practices in some fifteen medical specialties. Building on its expertise in therapeutic fields, the company has made significant advances in aesthetic medicine.

Thanks to its ongoing commitment to research and development, cutting-edge technologies and strategic partnerships, notably with L'ORÉAL's Research and Innovation Department, SYMATESE is accelerating its global roll-out in 2025, already initiated in 2024, and continuing to shape the future of regenerative and aesthetic medicine.
